Explanation of symbols:

S,F - Spring, Fall - refers to migration period for a migratory species & the calendar period for resident birds. S-March1- May 31 F-Aug - Nov. 30

s,W - Summer, Winter - refers to periods between migrations or the calendar season for resident birds. S-June 1-July 31 W-Dec. 1 - Feb. 28

(exceptions for some birds Spring arrival in Feb or Fall arrival in July)

Abundance symbols help to indicate your chances of finding a given species on an outing in Middlesex.

- c - Common - birds present in numbers, widespread or conspicuous, and should be seen in habitat and in season on almost every trip.
- u - Uncommon - birds present but due to low numbers, migration span, behaviour, or distribution will be seen in habitat and season on only some trips.
- r - Rare - birds present in low numbers or due to other factors not expected to be seen without special effort. (Seen only a few times in period).
- o - Occasional - birds not expected to be seen each year but may be present.
- a - Accidental - birds that have been reported but not likely to occur in the near future.
- i - Irregular -birds could be eruptive in numbers. eg. Winter finches.
- ? - Status unknown - unsubstantiated record(s) or presence of birds possible but status unknown at this time.
- * - Breeding - evidence indicating bird currently or previously nested.

The notations are intended to provide a broad guide to seasonal abundance and are generalizations from field observation and from records for Middlesex County. The list comprises the 339 species and 2 hybrids reported (Passenger Pigeon now excluded), including 158 species with confirmed breeding evidence. To report rare/occasional/accidental or new species contact Nature London Bird Record Secretary (psread11@gmail.com), Ontbirds or eBirds website. Names follow the Aug 2019 update of the 7th edition of eBird/Clements Bird Checklist. List herein compiled 1990 by Pete Read and Dave Martin for the Mcllwraith Field Naturalists of London.
